GridPulse Infrastructure Maintenance Report

Sample document for the GridPulse Milestone 4 demo (synthetic, not a real utility report)

Region: North Houston
Asset: Substation NH-3, transformer bank 2
Report date: 2026-10-14

Scheduled replacement of transformer bank 2 at substation NH-3 after an oil analysis flagged insulation wear.

Capacity reduction: 350 MW for the whole maintenance window.

Maintenance window: 2026-10-14 to 2026-10-21

Operators should expect higher peak-risk levels for North Houston while the bank is out of service.

Prepared by the GridPulse operations team.
